Ghanshyam Gupta, M.D  
Margaux Gonzalez, PA-C

### INFORMED CONSENT FOR ESOPHAGOGASTRODUODENOSCOPY (EGD) WITH PEG (PERCUTANEOUS ENDOSCOPIC GASTROSTOMY) TUBE PLACEMENT

#### Explanation of Procedure

PEG tube placement is a procedure during which a feeding tube will be placed into the stomach during an endoscopy. PEG tube placement requires that a very small incision be made in the abdomen through which the tube will enter the stomach for delivery of nutrition. This incision is small enough that it does not require any stitches and will be dressed with a small bandage after the procedure. At the time of your appointment, you will be given further instructions regarding care for your feeding tube. \_\_\_\_\_ (initials)

#### Principal Risks and Complications

Serious risks and possible complications may include, but are not limited to the below. Your physician will discuss their frequency with you, if you desire, with particular reference to your own indications for an EGD peg. YOU MUST ASK YOUR PHYSICIAN IF YOU HAVE ANY UNANSWERED QUESTIONS ABOUT YOUR TEST. All of the complications are potentially life threatening and can rarely lead to loss of life. \_\_\_\_\_ (initials)

1. **PERFORATION:** The risk is about 1 in 500. Passage of the instrument may result in an injury to the gastrointestinal wall with possible leakage of gastrointestinal contents into the body cavity. If this occurs, surgery to close the leak and/or drain the region could be required. Perforations are usually small requiring 4-5 days hospitalization, but could be severe requiring prolonged hospitalization or additional procedures, including surgery. \_\_\_\_\_ (initials)
2. **BLEEDING:** Bleeding or the management of this complication may consist of careful observation and may require transfusions or possibly a repeat procedure and even surgery. \_\_\_\_\_ (initials)
3. **INFECTION:** Local site infection may occur and is more common. Infection as a consequence of perforation is rare. Rarely passage of the endoscope and manipulations may cause infection elsewhere in the body. \_\_\_\_\_ (initials)
4. **PHLEBITIS:** Infection or irritation resulting in inflammation (phlebitis) may occur at the intravenous site and may require treatment. \_\_\_\_\_ (initials)
5. **SEDATION:** Sedation and analgesia, which are usually administered by an anesthesiologist, are given to produce sedation, a state that helps you relax and minimizes unpleasant sensations while maintaining adequate heart and lung function. Potential complications of sedation include: breathing problems (decreased respiration, aspiration, and airway blockage), heart problems (low blood pressure, or irregular rhythm) for which you will be monitored and treated if necessary. The medication may also cause an allergic reaction which will be treated but may rarely lead to loss of life. \_\_\_\_\_ (initials)
6. **OTHER RISKS:** Include drug reactions and complications from other diseases you may already have. Instrument failure is extremely rare, but remains a possibility and could require a repeat procedure. There is a possibility of a heart attack or stroke. A serious complication could result in death or permanent disability. You must inform your physician of all of your allergic tendencies and medical problems. \_\_\_\_\_ (initials)

### **Alternatives to an ERCP**

An EGD peg is safe and effective, however, other alternatives are available such as an appetite stimulant or conservative management. Another option is to choose no treatment. For stroke patients, other alternatives may be difficult until rehab is complete, as there is an inability to swallow. Your physician will be happy to discuss these options with you. \_\_\_\_\_ (initials)

The presence of any known **medical allergies**:       Not Present       Present

If present, please list:

---

My pregnancy status:       I am pregnant       I am not pregnant       Does not apply

I certify that I understand the information regarding an EGD peg. I have been fully informed of the risks and possible complications of my procedure. I hereby authorize and permit Ghanshyam Gupta, M.D. and whomever he may designate as his assistant to perform this procedure on me. \_\_\_\_\_ (initials)

If any unforeseen condition arises during this procedure calling for (in the physician's judgment) additional procedures, treatments, or operations, I authorize him to do whatever he deems advisable. I am aware that the practice of medicine and surgery is not an exact science and I acknowledge that no guarantees have been made to me concerning the result of this procedure. I am aware that in the event of a life threatening emergency, the physician will perform any necessary medical procedures if that is necessary.
